## ④ A useful trick w/loops

## ⑤ Summary

# Repetition?

Repetition  
means Loops

Looping in a  
collection

Looping on a  
collection

A useful trick  
w/loops

Summary

We often have to repeat a computation that is

- not a mere operation, *and*
- not convenient to do by hand.

## Example

- Compute the first 100 derivatives of  $f(x)$ .

# A complication

We may not know *how* many computations ahead of time!

## Examples

- Add the first  $n$  numbers
  - What is  $n$ ?
- Determine whether all elements of the set  $S$  are prime
  - What is in  $S$ ?

Repetition  
means Loops

Looping in a  
collection

Looping on a  
collection

A useful trick  
w/loops

Summary

# Solution: loops!

- **loop:** a sequence of statements that is repeated

big time bug: *infinite loops*

# Solution: loops!

Repetition  
means Loops

Looping in a  
collection

Looping on a  
collection

A useful trick  
w/loops

Summary

- **loop:** a sequence of statements that is repeated

big time bug: *infinite loops*

“infinite loop”: *see infinite loop*

— *AmigaDOS Glossary, ca. 1993*

Repetition  
means Loops

Looping in a  
collection

Looping on a  
collection

A useful trick  
w/loops

Summary

# The for command

`for c in C`

where

- $c$  is an identifier
- $C$  is an “iterable collection” (tuples, lists, sets)

# Outline

Repetition  
means Loops

Looping in a  
collection

Looping on a  
collection

A useful trick  
w/loops

Summary

## ① Repetition means Loops

## ② Looping in a collection

## ③ Looping on a collection

## ④ A useful trick w/loops

## ⑤ Summary

Repetition  
means Loops

Looping in a  
collection

Looping on a  
collection

A useful trick  
w/loops

Summary

## What does it do?

[ *statement* for  $c$  in  $C$  ]

or { *statement* for  $c$  in  $C$  }

or ( *statement* for  $c$  in  $C$  )

- suppose  $C$  has  $n$  elements
- result is a list/set/tuple
  - $i$ th value is value of *statement* at  $i$ th element of  $C$

# What does it do?

Repetition  
means Loops

Looping in a  
collection

Looping on a  
collection

A useful trick  
w/loops

Summary

[ *statement* for  $c$  in  $C$  ]

or { *statement* for  $c$  in  $C$  }

or ( *statement* for  $c$  in  $C$  )

- suppose  $C$  has  $n$  elements
  - $i$ th value is value of *statement* at  $i$ th element of  $C$
- loop variable  $c$  can be any valid identifier
  - Python programmers often use each

# Examples

Repetition  
means Loops

Looping in a  
collection

Looping on a  
collection

A useful trick  
w/loops

Summary

## Example

Sampling  $f(x) = x^2$  with 10 points on  $[2, 5]$

```
sage: f(x) = x**2
```

```
sage: delta_x = (5-2)/10
```

```
sage: [f(2 + i*delta_x) for i in range(10)]
```

```
[4, 529/100, 169/25, 841/100, 256/25, 49/4, 361/25,  
1681/100, 484/25, 2209/100]
```

# What happened?

means Loops

Looping in a  
collection

Looping on a  
collection

A useful trick  
w/loops

Summary

# What happened?

Repetition  
means Loops

Looping in a  
collection

Looping on a  
collection

A useful trick  
w/loops

Summary

`C == range(10) == [0, 1, ..., 9]`

loop 1: `i ← 0`

`f(2 + i*delta_x)` ↪ 4

# What happened?

Repetition  
means Loops

Looping in a  
collection

Looping on a  
collection

A useful trick  
w/loops

Summary

`C == range(10) == [0, 1, ..., 9]`

loop 1: `i ← 0`

`f(2 + i*delta_x)` ↪ 4

loop 2: `i ← 1`

`f(2 + i*delta_x)` ↪ 529/100

# What happened?

Repetition  
means Loops

Looping in a  
collection

Looping on a  
collection

A useful trick  
w/loops

Summary

`C == range(10) == [0, 1, ..., 9]`

loop 1: `i ← 0`

$$f(2 + i \cdot \text{delta\_x}) \rightsquigarrow 4$$

loop 2: `i ← 1`

$$f(2 + i \cdot \text{delta\_x}) \rightsquigarrow \frac{529}{100}$$

...

loop 10: `i ← 9`

$$f(2 + i \cdot \text{delta\_x}) \rightsquigarrow \frac{2209}{100}$$

## More detailed example

Repetition  
means Loops

Looping in a  
collection

Looping on a  
collection

A useful trick  
w/loops

Summary

Estimate  $\int_0^1 e^{x^2} dx$  using  $n$  left Riemann sums.

## More detailed example

Repetition  
means Loops

Looping in a  
collection

Looping on a  
collection

A useful trick  
w/loops

Summary

Estimate  $\int_0^1 e^{x^2} dx$  using  $n$  left Riemann sums.

- Excellent candidate for definite loop
  - Riemann sum: *repeated addition: loop!*
  - $n$  can be known to computer *but not to you*

First, *prepare pseudocode!*

Repetition  
means Loops

Looping in a  
collection

Looping on a  
collection

A useful trick  
w/loops

Summary

# Pseudocode?

## description of activity

- format independent of computer language
- prefer mathematics to programming
  - “ith element of  $L$ ” or “ $L_i$ ”, not  $L[i-1]$

# Building pseudocode

Repetition  
means Loops

Looping in a  
collection

Looping on a  
collection

A useful trick  
w/loops

Summary

Ask yourself:

- What list do I use to repeat the action(s)?
- What do I have to do in each loop?
  - How do I break the task into pieces?
  - *Divide et impera! Divide and conquer!*

# Pseudocode for definite loop

Repetition  
means Loops

Looping in a  
collection

Looping on a  
collection

A useful trick  
w/loops

Summary

*statement for*  $c \in C$

Notice:

- $\in$ , not `in` (mathematics, not Python)

## Riemann sum: review

Repetition  
means Loops

Looping in a  
collection

Looping on a  
collection

A useful trick  
w/loops

Summary

Let  $\Delta x$  be width of partition

Let  $X$  be left endpoints of partition

Add areas of rectangles on each partition

# Riemann sum: pseudocode

Repetition  
means Loops

Looping in a  
collection

Looping on a  
collection

A useful trick  
w/loops

Summary

Let  $\Delta x = \frac{b-a}{n}$

Let  $X = \{a + (i-1)\Delta x \text{ for } i \in \{1, \dots, n\}\}$        $x_i$  is left endpoint

Let  $I = \sum_{i=1}^n f(x_i) \Delta x$

## translates to Sage as...

Repetition  
means Loops

Looping in a  
collection

Looping on a  
collection

A useful trick  
w/loops

Summary

```
sage: a, b, n = 0, 1, 10                                setup
sage: f(x) = e**(x**2)                                  setup
sage: Delta_x = (b - a)/n                               translation
sage: C = range(1,n+1)                                 Python shortcut
sage: X = [a + (i - 1)*Delta_x for i in C]
sage: I = sum(f(x)*Delta_x for x in X)    thanks, Sage!
sage: I
e^(9/100) + e^(9/25) + e^(81/100) + e^(36/25) +
e^(9/4) + e^(81/25) + e^(441/100) + e^(144/25) +
e^(729/100) + 1
sage: round(_, 5)
1.3812606013
```

# Outline

Repetition  
means Loops

Looping in a  
collection

Looping on a  
collection

A useful trick  
w/loops

Summary

## ① Repetition means Loops

## ② Looping in a collection

## ③ Looping on a collection

## ④ A useful trick w/loops

## ⑤ Summary

# What does it do?

**for  $c$  in  $C$ :**

*statement1*

*statement2*

...

*statement outside loop*

- suppose  $C$  has  $n$  elements
- *statement1*, *statement2*, etc. are repeated (looped)  $n$  times
- on  $i$ th loop,  $c$  has the value of  $i$ th element of  $C$
- if you modify  $c$ ,
  - corresponding element of  $C$  does *not* change
  - on next loop,  $c$  takes next element of  $C$  anyway
- *statement outside loop* & subsequent not repeated

## Less trivial example

Repetition  
means Loops

Looping in a  
collection

Looping on a  
collection

A useful trick  
w/loops

Summary

```
sage: for f in [x**2, cos(x), e**x*cos(x)]:  
        print diff(f)  
  
2*x  
-sin(x)  
-e^x*sin(x) + e^x*cos(x)
```

# What happened?

Repetition  
means Loops

Looping in a  
collection

Looping on a  
collection

A useful trick  
w/loops

Summary

```
C == [x**2, cos(x), e**x*cos(x)]
```

Repetition  
means Loops

Looping in a  
collection

Looping on a  
collection

A useful trick  
w/loops

Summary

# What happened?

```
C == [x**2, cos(x), e**x*cos(x)]
```

```
loop 1: f ← x**2
        print diff(f)  ↵  2x
```

# What happened?

Repetition  
means Loops

Looping in a  
collection

Looping on a  
collection

A useful trick  
w/loops

Summary

```
C == [x**2, cos(x), e**x*cos(x)]
```

```
loop 1: f ← x**2
        print diff(f)  ↪  2x
```

```
loop 2: f ← cos(x)
        print diff(f)  ↪  -sin(x)
```

# What happened?

Repetition  
means Loops

Looping in a  
collection

Looping on a  
collection

A useful trick  
w/loops

Summary

$C == [x^{**}2, \cos(x), e^{**}x*\cos(x)]$

loop 1:  $f \leftarrow x^{**}2$   
print diff(f)  $\rightsquigarrow 2x$

loop 2:  $f \leftarrow \cos(x)$   
print diff(f)  $\rightsquigarrow -\sin(x)$

loop 3:  $f \leftarrow e^{**}x*\cos(x)$   
print diff(f)  $\rightsquigarrow -e^x*\sin(x) + e^x*\cos(x)$

# Changing each?

Repetition  
means Loops

collection

Looping on a  
collection

A useful trick  
w/loops

Summary

Don't modify  $C$  unless you know what you're doing.  
Usually, you don't.

```
sage: C = [1,2,3,4]
```

```
sage: for c in C:  
        C.append(c+1)
```

...infinite loop!

## More detailed example

Use Euler approximation with 200 points to plot an approximate solution to a differential equation

$$y' = f(x, y)$$

starting at the point  $(1, 1)$  and ending at  $x = 4$  (we'll define  $f$  later)

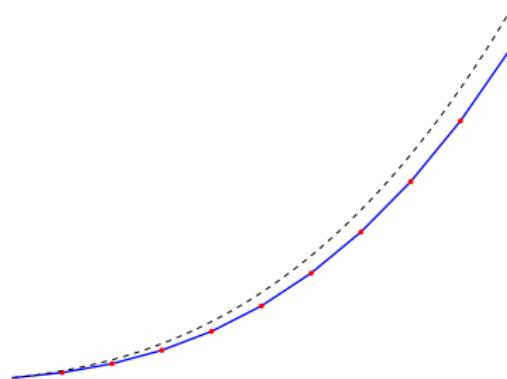

## More detailed example

Use Euler approximation with 200 points to plot an approximate solution to a differential equation

$$y' = f(x, y)$$

starting at the point  $(1, 1)$  and ending at  $x = 4$  (we'll define  $f$  later)  
Euler approximation?!

- given a point  $(x_i, y_i)$  on the curve,
- the *next* point  $(x_{i+1}, y_{i+1}) \approx (x_i + \Delta x, y_i + y' \cdot \Delta x)$

# Building pseudocode

Repetition  
means Loops

Looping in a  
collection

Looping on a  
collection

A useful trick  
w/loops

Summary

Ask yourself:

- What list(s) do I use to repeat the action(s)?
- What do I have to do in each loop?
  - How do I break the task into pieces?
  - *Divide et impera! Divide and conquer!*

# Pseudocode

Repetition  
means Loops

Looping in a  
collection

Looping on a  
collection

A useful trick  
w/loops

Summary

```
Let  $x_0, y_0 = (1, 1)$            setup
Let  $a = 1$  and  $b = 4$           ...
Let  $\Delta x = b - a / n$         ...
Let  $C = (1, 2, \dots, n)$       collection over which to iterate
for  $i \in C$                   loop
     $y_i = y_{i-1} + \Delta x \cdot f(x_{i-1}, y_{i-1})$  Euler approximation
     $x_i = x_{i-1} + \Delta x$                       move to next  $x$ 
```

## Translates to sage as...

Repetition  
means Loops

Looping in a  
collection

Looping on a  
collection

A useful trick  
w/loops

Summary

```
sage: XY = [(1,1)]           XY will be list of points
sage: a,b,n = 1,4,200         setup
sage: Delta_x = (b-a)/n      ...
sage: for i in range(n):     loop
    XY.append((X[i] + Delta_x,
                Y[i] + Delta_x * f(X[i],Y[i])))
```

## Try it!

```
sage: f(x,y) = x**2
```

```
sage: [type the above]
```

```
sage: XY[-1]
```

last entry in XY

```
(4, 1751009/80000)
```

```
sage: round(_,5)
```

```
21.88761
```

## Try it!

## ④ A useful trick w/loops

## ⑤ Summary

# Looping through nonexistent lists

Repetition  
means Loops

Looping in a  
collection

Looping on a  
collection

A useful trick  
w/loops

Summary

- `range(n)` creates a list of  $n$  elements
  - `for each in range(n)` creates the list before looping
- constructing a list, merely to repeat  $n$  times, is wasteful
  - `for each in xrange(n)` has same effect
  - slightly faster, uses less computer memory

# Outline
