John Perry

What is Sage?

Getting started with Sage

Using computer memory

Summary

Analogy: "Free" Mathematics

◆□▶ ◆□▶ ◆□▶ ◆□▶ □ のQで

Theorem (Euclid) *There are infinitely many primes.*

Proof.

- Consider finite list of primes, q_1, q_2, \ldots, q_n .
- Let $p = q_1 q_2 \cdots q_n + 1$.
- Fact: since $p \neq 1$, divisible by at least one prime
- By Division Theorem, p not divisible by any q_i (remainder 1, not 0).
- p divisible by unlisted prime q_{n+1} !
- .: no finite list, lists all primes.

John Perry

What is Sage?

Getting started with Sage

Using computer memory

Summary

Analogy: "Secret" mathematics

Theorem (Fermat)

If n > 2, the equation $a^n + b^n = c^n$ has no solution with integers $a, b, c \ge 1$.

Proof.

"I have discovered a truly marvelous proof of this, which this margin is too narrow to contain."[†]

[†]Real quote. (to be fair: in private notes, not letter, article)

John Perry

What is Sage?

Getting started with Sage

Using computer memory

Summary

Analogy: "Proprietary" mathematics

< ロ > < 同 > < 三 > < 三 > < 三 > < ○ < ○ </p>

Theorem (Mersenne) *The number*

 $2^{n} - 1$

is prime for n = 2, 3, 5, 7, 13, 17, 19, 31, 67, 127, 257. Proof.

Trade Secret.[†]

[†]In fact, the "theorem" is false.

John Perry

- Using computer memory
- Summary

But I prefer M—!

◆□▶ ◆□▶ ◆□▶ ◆□▶ □ のQで

- Fine, buy your own copy
 - good reasons exist
 - student discount available
 - I will tell you the equivalent commands
- Be warned:
 - future versions not free
 - bug fixes not free
 - after you graduate, pay full price
 - not always backwards compatible (neither is Sage, but Sage is free)

Python

▲□▶▲□▶▲□▶▲□▶ □ のQ@

What is Sage?

MAT 305: Mathematical

Computing John Perry

- Getting started with Sage
- Using computer memory
- Summary

- "Sage" built on/with Python
 - interface between Sage and user

- Not all components of Sage in Python:
 - Maxima: LISP
 - SINGULAR: C/C++
 - "kernel" "compiled" for efficiency's sake

John Perry

What is Sage?

Getting started with Sage

Using computer memory

Summary

Advantages of Python

◆□▶ ◆□▶ ◆□▶ ◆□▶ □ - つへつ

• Modern

- facilities for object-oriented, functional programming
- Wide distribution, usage
 - many employers use it (doing well in this class makes you more attractive!)

• Flexible

- many good packages enhance it
- Can compile for efficiency using Cython

Python \neq Sage

< ロ > < 同 > < 三 > < 三 > < 三 > < ○ < ○ </p>

How to get Sage

▲□▶▲□▶▲□▶▲□▶ □ のQ@

What is Sage?

MAT 305: Mathematical

Computing John Perry

Getting started with Sage

- Using computer memory
- Summary

- Best: SageMathCloud
- Download, install to your computer
 - can tinker with/break the source code
 - Windows? need LiveCD or VirtualBox player: www.virtualbox.org/wiki/Downloads
 - ask nicely, & I might give you a DVD with Sage for Windows, Mac, Linux

John Perry

What is Sage?

Getting started with Sage

- Using computer memory
- Summary

First steps in Sage

- Log in to SageMathCloud
- Start a new project
 - name it "First Sage Assignment"
 - select type "SageMath Worksheet"
 - visit "Settings", click "Project usage and quotas"
 - click "Network access" and "Member hosting", then "Submit changes"
 - Now return to "First Sage Assignment" (near top)
- If you like (not always recommended)
 - Click "Modes", then "Typeset output"

John Perry

What is Sage?

Getting started with Sage

Using computer memory

Summary

Working with variables

▲□▶▲□▶▲□▶▲□▶ □ のQ@

Variable: symbol that represents another value Example

sage: a = 7

Until you change it, a represents 7

John Perry

What is Sage

Getting started with Sage

Using computer memory

Summary

Symbols of symbolic computation

Indeterminate: symbol with no specific value ("unknown")special kind of variable

- x pre-defined
 - if value assigned, no longer indeterminate
- Need more? use var()
 - var('y') defines y
 - var('a b c d') defines *a*, *b*, *c*, *d*
- Use undefined variable?

```
sage: x+y+z
...
NameError: name 'z' is not defined
```

Arithmetic

▲□▶ ▲□▶ ▲ □▶ ▲ □▶ ▲ □ ● ● ● ●

operation	sage equivalent
add <i>x</i> , <i>y</i>	x + y
subtract <i>y</i> from <i>x</i>	x - y
multiply <i>x</i> , <i>y</i>	x * y
divide <i>x</i> by <i>y</i>	x / y
raise <i>x</i> to the <i>y</i> th power	x ** y or x ^ y

John Perry What is Sage?

MAT 305: Mathematical

Computing

Getting started with Sage

Using computer memory

Arithmetic

operation	sage equivalent
add <i>x</i> , <i>y</i>	x + y
subtract <i>y</i> from <i>x</i>	x - y
multiply <i>x</i> , <i>y</i>	x * y
divide <i>x</i> by <i>y</i>	x / y
raise <i>x</i> to the <i>y</i> th power	x ** y or x ^ y

- Do not omit muliplication symbol
 - $2 * x \longrightarrow 2x$
 - $2x \longrightarrow SyntaxError$: invalid syntax
 - possible, but dangerous, to get around this using implicit_multiplication(True)
- Do not neglect parentheses
 - $e^{**(2*x)} \neq e^{**2*x}$
- Prefer ** to ^ for various sordid reasons (scripting)

What is Sage?

•
$$\log(x) = \ln x \neq \log_{10} x$$

John Perry

What is Sage?

Getting started with Sage

Using computer memory

Summary

Some useful operations

▲□▶ ▲□▶ ▲ □▶ ▲ □▶ ▲ □ ● ● ● ●

operation	sage equivalent
factor <i>expr</i>	<pre>factor(expr)</pre>
simplify expr	<pre>simplify(expr)</pre>
expand <i>expr</i>	expand(<i>expr</i>)
round <i>expr</i> to <i>n</i> decimal places	round(expr, n)

Examples

▲□▶▲□▶▲□▶▲□▶ □ のQ@

John Perry What is Sage?

MAT 305: Mathematical

Computing

Getting started with Sage

Using computer memory

Summary

• Some expressions simplify automatically; many need hints

```
sage: (x**2 - 1) / (x - 1)
(x^2 - 1)/(x - 1)
sage: (factor(x**2 - 1)) / (x - 1)
x + 1
```

(good reason this isn't automatic: what?)

• Expand
$$(x-1)(x^3+x^2+x+1)$$

sage: expand((x-1)*(x**3+x**2+x+1))
x^4 - 1

• Round e to 5 decimal places

```
sage: round(e,5)
2.71828
```

Expressions

• Use computer memory by defining *expressions* with the assignment symbol =

```
sage: f = x * * 2 - 1
```

Sage does not answer when you define an expression

- Expressions remembered until you terminate Sage sage: f $x^2 - 1$
- Can remember "structures" as well as expressions

sage: R = GF(7) # I'll tell you what this is later

▲□▶▲□▶▲□▶▲□▶ □ のQ@

John Perry

Using computer memory

Valid names

▲□▶▲□▶▲□▶▲□▶ □ のQ@

What is Sage?

MAT 305: Mathematical

Computing John Perry

Getting started with Sage

Using computer memory

Summary

Names for expressions ("identifiers") can

- contain letters (A–Z), digits (0–9), or the underscore (_) but
- must begin with a letter or the underscore and
- may not contain other character (space, tab, !@#\$%[^], etc.)

MAT 305: Mathematical Computing John Perry

What is Sage

Getting started with Sage

Using computer memory

Summary

Using expressions

▲□▶▲□▶▲□▶▲□▶ □ のQ@

• Manipulate just like the object it represents

```
sage: factor(f)
(x - 1)*(x + 1)
sage: f - 3
x^2 - 4
```

• Avoid repeating computations: substitute!

```
sage: f(x=3)
8
sage: f(x=-1)
0
sage: f(x=4)
15
```

John Perry

What is Sage

Getting started with Sage

Using computer memory

Summary

Alternate method of substitution

Sometimes you should use the **dictionary** method of substitution. An example would be when an identifier stands for a variable.

sage:	f = x * * 2	+	y**2	
sage:	f(x=3)			
9 + y^	2			
sage:	f({x:3})			
9 + y^2				

This also means replace x by 3 in f

▲□▶▲□▶▲□▶▲□▶ □ のQ@

John Perry

What is Sage

Getting started with Sage

Using computer memory

Summary

Alternate method of substitution

Sometimes you should use the **dictionary** method of substitution. An example would be when an identifier stands for a variable.

sage:	$f = x * * 2 \cdot $	+ y**2
sage:	f(x=3)	
9 + y^	2	
sage:	f({x:3})	
9 + y^	2	
sage:	z = x	
sage:	f(z=3)	
x^2 +	y^2	

This also means replace x by 3 in f

Here we let z stand in place of xWe want to replace x by 3, but...
