

# A canticle for Euclid

John Perry

University of Southern Mississippi

March 2018

A canticle for  
Euclid

John Perry

You're kidding,  
right?

A Canticle for  
Euclid

A problem

Towards a definition of  
"shiny"

Why Euclid?

What is mathematics?

Why aren't our  
students creative?

How do we create  
ideas?

How do we teach  
mathematics?

How should we not  
teach mathematics?

Shiny math!

Fight the **Symbolab**

Outreach

Some final  
thoughts

...but one  
more thing!

**We don't care  
which computer you buy.  
We'll help you  
get the most out of it.**

**CompuServe puts a world of information, communications, and entertainment at your fingertips.**

CompuServe is the way to use videotex service designed for the personal computer user and managed by the communications professionals who provide business information services to over one fifth of the Fortune 500 companies. Subscribers get a wealth of useful, profitable, or just plain interesting information: the national news wires, electronic banking and shop at home services, and sophisticated financial data. Plus, a communications network for electronic mail, a bulletin board for selling, swapping, and personal notices and a multi-character CB simulator.

You get games on CompuServe, too. Classic puzzles, educational, sports and adventure games and fantastic space games featuring Megafighters, the "ultimate computer conflict."

To learn more about CompuServe, call toll free, 800-848-8990, for an illustrated guide to the CompuServe Information Service. The videotex service for you, no matter which computer you buy.

more thing!

**Postulate.** Given any line, through any point not on the line there is exactly one line parallel to the first.

**Proof.** There ain't none. (Postulates are like that.)

**Weird.** Geometries where this is false exist. (Our universe "lives in" one of them.)

**Theorem.** For any nonzero  $a, b \in \mathbb{Z}$ :

- Let  $c = \max(a, b)$ ,  $d = \min(a, b)$
- **While**  $d \neq 0$ 
  - Let  $r$  be remainder of  $c \div d$
  - Let  $c = d$ ,  $d = r$

Then  $\gcd(a, b)$  is the last  $c$ .

...but one  
more thing!

**Theorem.** For any nonzero  $a, b \in \mathbb{Z}$ :

- Let  $c = \max(a, b)$ ,  $d = \min(a, b)$
- **While**  $d \neq 0$ 
  - Let  $r$  be remainder of  $c \div d$
  - Let  $c = d$ ,  $d = r$

Then  $\gcd(a, b)$  is the last  $c$ .

**Proof.** I have a truly marvelous proof, but there is only enough room in the margin to animate it.

You're kidding, right?

...but one  
more thing!

Our students *are* creative.

Not recognizing it doesn't mean it ain't there.

The problem is that the educational system has beat into us  
[faculty!] that if you don't find *the one correct answer in 30  
seconds* then you aren't creative.

Put yourself in her shoes.

- I earned an A.
- That's an outstanding grade.
- What I don't know is not a big deal.
- Why study?

Next semester: Things aren't as easy as that.

Course evaluation comment:

**“When I left Dr. Perry's office I was in tears.”**

**An undeserved grade is neither favor nor mercy.  
It is a setup for literal failure.**

## Chomp

### Rules

1. Two players alternate turns.
2. On your turn, choose a corner and "chomp" each square northeast of it.
3. The player who chomps the poisoned red square loses!
4. Can you find a strategy that guarantees a win?

## Ideal Nim

Modern Algebra I, II

August 18, 2016

Ideal Nim is a game for two players. To start, choose a set of not-too-many points  $F$ . This defines the *Forbidden Frontier*. A point  $(c, d)$  lies in the *Forbidden Frontier* if

- $(c, d)$  does not lie "northeast" of any point in  $F$ ;

or, more precisely,

- for any point  $(a, b) \in F$ ,  $c \leq a$  or  $d \leq b$ .

Players may not choose a point in the *Forbidden Frontier*.

Gameplay consists of choosing points  $(c, d)$  and adding them to a set  $G$ , which defines a region *Gone from Gameplay*. A point  $(m, n)$  is *Gone from Gameplay* if

- $(m, n)$  lies "northeast" of some point of  $G$ ;

or, more precisely,

- we can find a point  $(c, d) \in G$  such that  $c \leq m$  and  $d \leq n$ .

Players may not choose a point that is *Gone from Gameplay*.

### Examples

This game is defined by  $F = \{(0,2), (2,0)\}$ . The *Forbidden Frontier* consists of the four points  $(0,0)$ ,  $(0,1)$ ,  $(1,0)$ , and  $(1,1)$ . No moves have been made, so no points are *Gone from Gameplay*.

This game is defined by  $F = \{(0,2), (2,0)\}$ . The *Forbidden Frontier* consists of the four points  $(0,0)$ ,  $(0,1)$ ,  $(1,0)$ , and  $(1,1)$ . At least two moves have been made, to  $(2,2)$  and  $(1,4)$ . Any point *inside* or *bordering* the gray region is *Gone from Gameplay*.

This game is defined by  $F = \{(1,2), (2,1), (3,0)\}$ . The *Forbidden Frontier* consists of the points that lie *inside* the red region. At least two moves have been made, to  $(2,2)$  and  $(3,0)$ . The only playable points remaining are  $(2,1)$  and  $(1,y)$ , for any  $y \geq 2$ .
